

Typical Drywall Construction Details Using Libra Stud and Track.

Libra Stud and Track is a metal non load-bearing partition system consisting of studs and ceiling/floor tracks which, when combined together, form a framework designed to accept gypsum wallboard in single and double thickness. The systems can be used to accommodate either domestic or commercial situations.

Libra Studs are available in several widths – 48mm, 50mm, 60mm, 70mm, 73mm, 92mm and 146mm. All studs are designed to be joined together to form a box for when additional strength is required.

The faces of the studs are knurled to assist with screw penetration when fixing the gypsum wallboard with drywall screws.

There are cut-outs in the base of the studs to ease the installation of services.

The legs of the stud incorporate a Safety Edge to contribute to the Health and Safety aspect when handling the product.

Libra Tracks are available with several leg heights – 25mm, 30mm, 50mm and 70mm according to the application required.

Libra Studs and Tracks are manufactured using pre-galvanised mild steel to BS EN 10346 2009.
